Direct integration support

Import unlimited company files into Expensify to bring in expense categories, classes, customers, projects, locations, and items. Export receipt images and all expense coding data from Expensify to QuickBooks.

Natively support QuickBooks Tax

Directly pull in all tax rates from QuickBooks and export them at the line-item level for a true global solution for all QuickBooks customers.

Auto-sync for realtime visibility

No need to provision two systems as Expensify's auto-sync updates any changes to your expense categories or other GL accounts immediately. Simultaneously, all final approved reports are exported back to QuickBooks, removing manual admin overhead.

Auto-reconcile Expensify Card transactions

In one automatic sync, Expensify will create the liability account and Journal Entry to balance out the payment of your monthly transactions, saving admins hours reconciling their statements at the end of each month.

Direct corporate card integrations

Expensify has native integrations with all major corporate providers which download transactions directly into member accounts and auto-merge them with receipt images that are submitted at the point of sale.
